1. TOUCH DISPLAY COMPUTER

1.1 TOUCH-PC

DLOGIC™

DLOGIC, GmbH®, headquartered in Baar, Switzerland, designs and manufacturers state of the art industrial touch display computers for wide range of applications, from the ground up. Built on Western business principles the owners, management and staff are of German, Swiss, Norwegian, English and Chinese native backgrounds.

DL-DM700x-SGF-IO:
Customized Multi-Purpose Interfaces

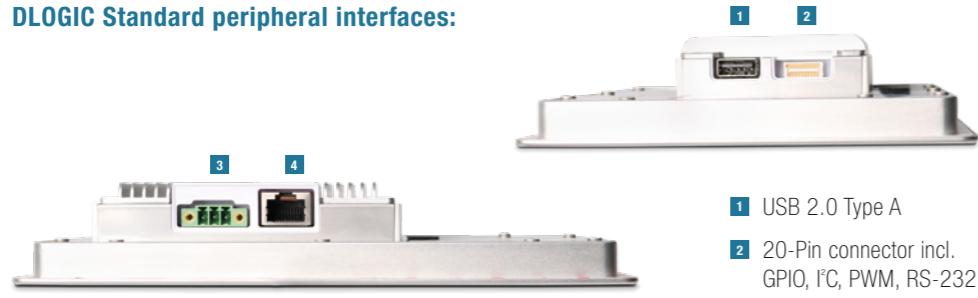

Formed in 2008, we saw the success of the original iPhone and figured this would lead to a demand for sophisticated touch based graphical user interface devices across many markets and applications.

DL-DM1210x-SGR:
Rear Mounting with 4mm protruded safety glass

Since then, a wide portfolio of standard touch-enabled display products, along with custom solutions for an array of OEM customers was developed and shipped. The extensive knowledge and vast experience allows DLOGIC's engineering team to work closely with customers to meet the unique requirements for the most demanding applications. The product realization services combine customized touch display computing technologies into a fully integrated and tested turnkey product.

DLOGIC Standard peripheral interfaces:

- 1 USB 2.0 Type A
- 2 20-Pin connector incl.
GPIO, I²C, PWM, RS-232
- 3 3-Pin Phoenix Power
Supply 9-38VDC
- 4 Gigabit Ethernet RJ45

1.1 TOUCH-PC

DLOGIC™

DLOGIC touch display computers are slim attractive all-in-one human interface solutions ready for use in your application. They are designed for rapid implementation into industrial equipment, appliances, vending-machines, marine, tracking and healthcare and are suitable for use in indoor, outdoor and harsh environments.

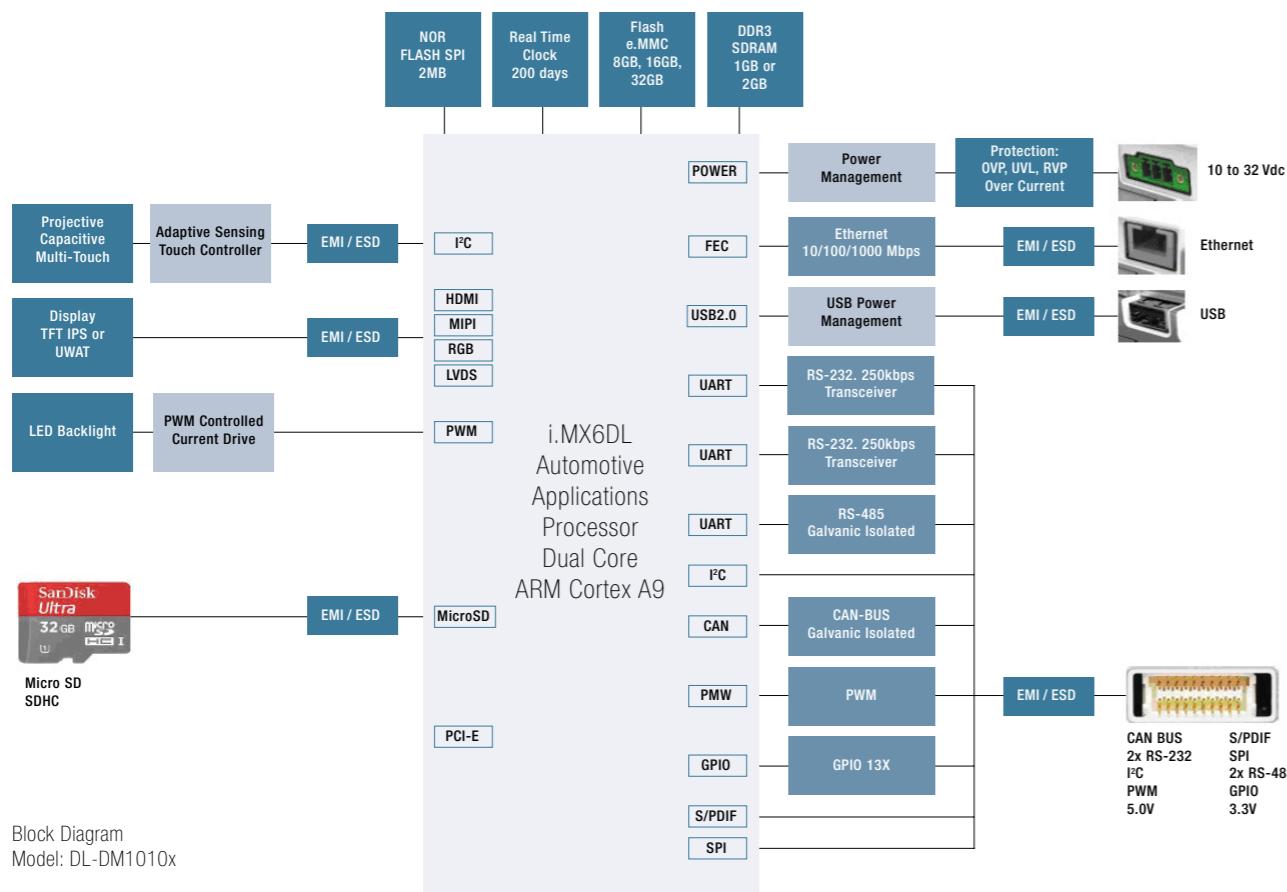

It integrates a color display, a projected capacitive touch sensor and an embedded computer into a stainless-steel housing with an aluminum frame creating a solid rugged assembly protecting the sensitive parts. They come with many standard interfaces and are configured with Linux ready for loading and running your applications. They provide a cost effective and fast track to equip your product with state of the art touch-based user interfaces and enhanced embedded computing power.

Overview of the advantages of DLOGIC Touch-PC:

- Touch display computers ready for integration
- IPS display with high brightness LED backlight, 550 nits
- Optically bonded projected capacitive multi-touch screen
- Slim metal housing with a range of high reliability standard interfaces
- Software board support package, HTML5, JAVA, QT, 2D, 3D graphics and video playback
- Tailored mechanical mounting and integration solutions
- Simple addition of custom interface extensions
- Optional optically bonded 4 mm safety glass solutions, UL751 S46B
- Stainless steel 316L housing option
- Supported by a highly skilled engineering team

1.2 TOUCH MONITORS

DLOGIC™

DLOGIC's high performance Projected Capacitive Touch Monitors are designed to interface to any 3rd party LVDS or HDMI embedded PC or computer solution, and suitable for a wide range of applications.

DL-DM1210-HDMI:
Touch Monitor with HDMI + USB interface for front mounting

DL-DM700-LVDS-SGR:
LVDS-Touch Monitor with protruded 4mm safety glass

GENERAL PARAMETERS	SERIES	SIZE	DISPLAY RESOLUTION	PROCESSING MODULE	OPTICAL BONDING	STAINLESS STEEL HOUNSING*	4 MM SAFETY GLASS FRONT MOUNT*	4 MM SAFETY GLASS REAR MOUNT*	LVDS	HDMI + USB	OPTICAL BONDING	4 MM SAFETY GLASS FRONT MOUNT*	4 MM SAFETY GLASS REAR MOUNT*

*Options – available on request

Connection Types:

- Unified LVDS: integrating LVDS video, touch control and backlight voltage
- HDMI + USB: Standard HDMI 1.3 for video, USB 2.0 Type-C for touch, 3-pin power supply 10-32 VDC

DL-DM1210-HDMI:
Screwable HDMI-, USB-Type C- and 3-pin Phoenix interfaces

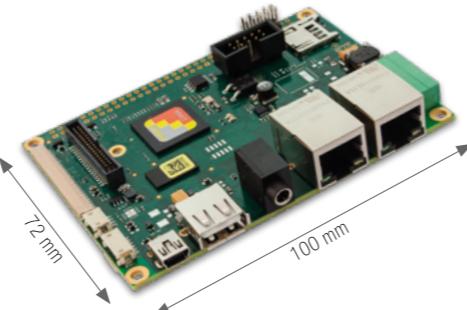

2. EMBEDDED BOARDS

2.1 SINGLE BOARD COMPUTER (SBC)

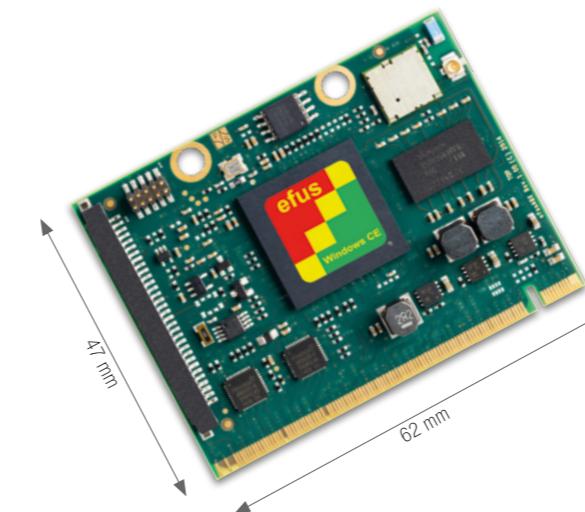

F&S Elektronik Systeme GmbH is a German company which is specialized in Embedded Boards with WindowsCE and Linux. The ARM – based embedded modules from F&S are available as computer-on-module-boards in different form factors as well as single-board computers in the form factor of PicoITX. The boards enable to connect simple and cost- optimized displays from QVGA up to FullHD. A minimum availability of 10 years can be guaranteed by the used NXP CPUs (Cortex-A5/-A7/-A9) from market launch. Also F&S has their own assembly production, produced with modern production facilities in Stuttgart, Germany. Furthermore, many years of experience in the Embedded Market result in innovative and up to date customer solutions, completed by an extensive soft- and hardware support.

3. TFT-DISPLAYS

3.1 TFT-DISPLAYS – SUNLIGHT READABLE

Solomon Goldentek Display (SGD) started up more than 20 years ago as a subsidiary of the Taiwan semiconductor group Solomon Technology Corporation. SGD specialises in extremely high-quality TFT modules in the range 3.5 to 15.0" inches which are particularly suitable for industrial applications.

A further strength of SGD are sunlight readable TFT modules in the range 3.5 to 15.0 inches. The displays have a high bright backlight up to 1.500 cd/m². Furthermore, an additional Low-Reflection Polarizer can be assembled, which reduces the reflection rate significantly.

Overview of the advantages of Solomon Goldentek Display (SGD) TFT modules:

- Modules available in high bright and super high bright versions
- Minimum backlight lifetime of up to 50.000 hours
- Extended operating temperature range -30°C ... +85°C
- **5-year operational guarantee on workmanship and interface**

3.2 TFT-DISPLAYS

Multi-Inno Technology Co., Ltd is a company specialising in TFT modules, which are produced in China. A high priority in the production of these models is the cost optimization with extremely high quality standards.

Multi-Inno has setup up a new generation of industrial TFT modules which are also available with Projected Capacitive Touch Panel (PCAP).

4. DISPLAYS – TFT / OLED / LCD

4.1 OLED-DISPLAYS

Established in 2007, **Raystar Optronics**, Inc. is the leading manufacturer of TFT-Displays, pmOLED (Passive Matrix OLED) and modules in Central Taiwan Science Park, Taiwan.

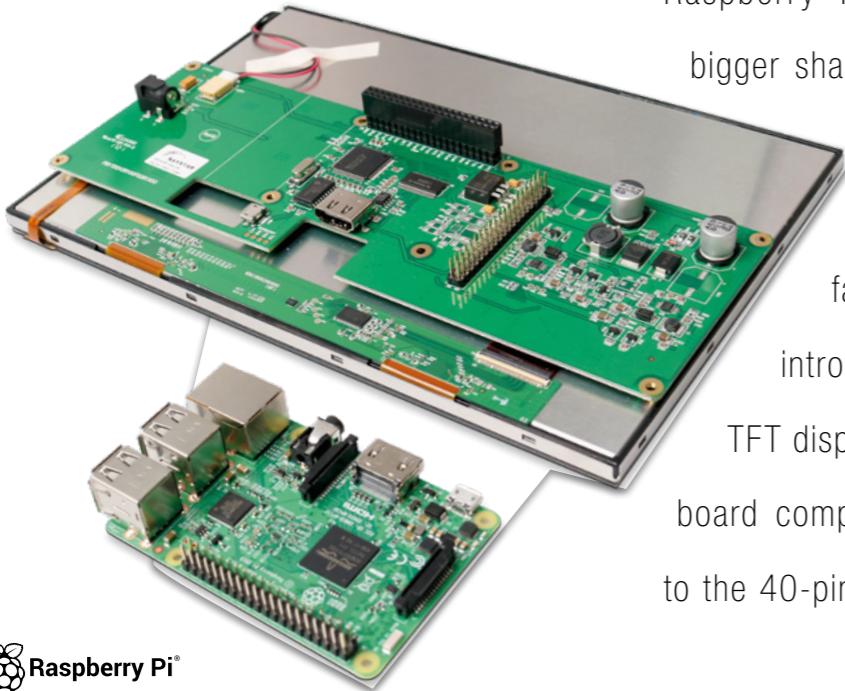

Raystar built its reputation by offering advanced technology, design services and manufacturing efficiency in Character OLED modules, Graphic OLED modules, TFT LCM display modules, Monochrome Character LCD modules, Graphic LCM display modules products. Our products are for small and medium sizes and covered in industrial and consumer applications.

4.2 TFT DISPLAYS – HDMI RASPBERRY PI

Raspberry Pi®

TFT module compatible to Raspberry Pi 3

This TFT display series is available in the sizes 5.7", 7.0" (with two different resolutions) and 10.1". You can simply use this TFT display with your Raspberry Pi, or also you can use it as computer display with any device which has an HDMI output. Additional to the HDMI plug the TFTs are equipped with the standard 40 pin Raspberry Pi GPIOs for easy plug and play. There is a single 5V power input required only, to drive the backlight, touch panel, TFT-display and the Raspberry Pi. With high brightness backlights the readability is extraordinary good.

For enhanced embedded computing applications the capacitive touch modules are the perfectly fitting solution. They are designed to make Raspberry Pi usage become easy. You only have to integrate it into your application.

Raspberry Pi computer modules gain bigger shares on the industrial market. To simplify the integration in human machine interfaces, Raystar Optronics Ltd. introduced a special series of TFT displays. The Raspberry Pi single board computer can be easily attached to the 40-pin GPIO header.

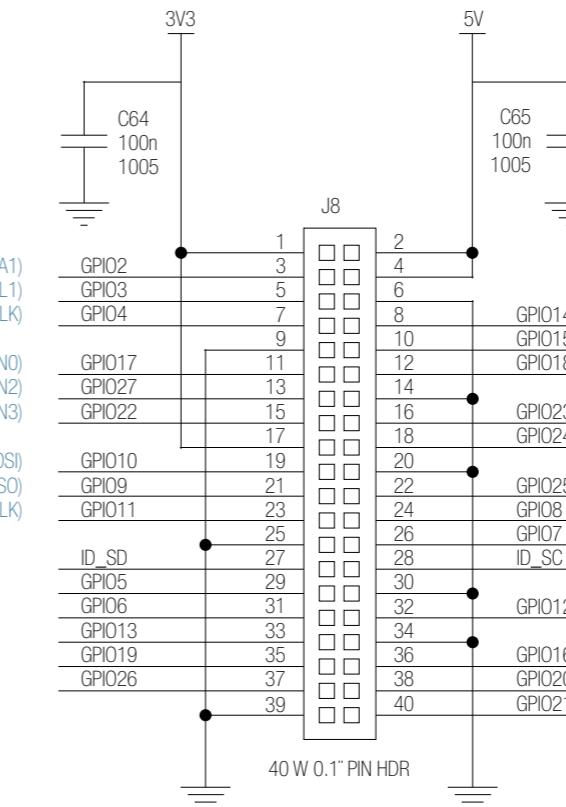

Overview of the advantages of HDMI Raspberry Pi:

- Single voltage input of 5V for touch panel, backlight, TFT-display and Raspberry Pi
- Raspberry Pi 40 pin header to support GPIOs
- Standard HDMI connector to use with any device
- Supports resistive / capacitive touch panels over USB interface
- LED lifetime up to 50 k hours
- Operating temperature up to -20 °C to +70 °C

Compact and secure assembly of TFT-module and Raspberry Pi 3

4.2 TFT DISPLAYS – HDMI RASPBERRY PI

Pin-Out 40-pin GPIO header

ID_SD and ID_SC PINS:
These pins are reserved for HAT ID EEPROM.

At boot time this I2C interface will be interrogated to look for an EEPROM that identifies the attached board and allows automatic setup of the GPIOs (and optionally, Linus drivers).

DO NOT USE these pins for anything other than attaching an I2C ID EEPROM. Leave unconnected if ID EEPROM not required.

The Q-series of RAYSTAR Optronics is a unified 36-pin standard MCU interface. All modules include the Solomon Systech controller SSD1963, which can be driven by 8 or 16bit. Due to the unified interface, there's no need to change the board layout to drive the TFT of 3.5" up to 10.2".

Overview of the Q-series advantages

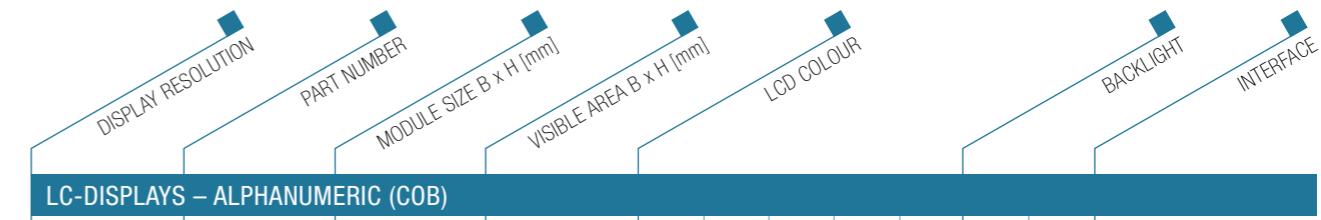

- All Q-series modules built-in SSD1963 controller
 - 36-pin connector on board and all connectors are in the same direction
 - All TFT Q-series are both fit for 8 and 16 bit interface
 - Built-in Backlight driver
 - Resistive and capacitive Touch are available for all Q-series modules

 4.4 LC-DISPLAYS – ALPHANUMERIC (COB)

Standard alphanumeric LCD displays are used in many Industrial applications. Our portfolio of the manufacturer Raystar Optronics supports a wide range of flexibility: size, resolution, and backlight colour can be selected for each single display.

4.5 LC-DISPLAYS – GRAPHIC (COB)

Raystar Optronics also offers a wide range of standard graphical LCDs. Size, resolution, Backlight color and LCD technology can also be collected for each display.

M:Negative/Positive voltage with temperature compensation
V:With Negative/Positive voltage output
X:Without Negative/Positive voltage output

e 5.1 OLED-DISPLAYS

In the past 10 years **RiTdisplay Corp.** has grown to a world market leader for passive OLED displays. The spectrum of these products extends from monochrome to full colour OLEDs. Special optical qualities of the OLED displays are an extremely high contrast of 2000:1 and an unusually wide viewing angle of 160°. Most of the displays have in addition to the 8-bit parallel interface an SPI and I²C interface.
