

SGM13005H4

Low Noise Amplifier with Bypass Switch for LTE High Band

GENERAL DESCRIPTION

The SGM13005H4 is a low noise amplifier (LNA) with bypass for LTE high band receiving application. The device features high gain, low noise figure and high linearity over a supply voltage range from 1.5V to 3.6V. Low noise figure and high gain improve the sensitivity of the SGM13005H4, and high linearity enables the device to provide better immunity to interference signals.

No external DC blocking capacitors are required on the RF paths as long as no external DC voltage is applied, which can save PCB area and cost.

The SGM13005H4 is available in a Green UTDFN-1.1×0.7-6L package.

OVERSTRESS CAUTION

Stresses beyond those listed in Absolute Maximum Ratings may cause permanent damage to the device. Exposure to absolute maximum rating conditions for extended periods may affect reliability. Functional operation of the device at any conditions beyond those indicated in the Recommended Operating Conditions section is not implied.

ESD SENSITIVITY CAUTION

This integrated circuit can be damaged if ESD protections are not considered carefully. SGMICRO recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage. ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because even small parametric changes could cause the device not to meet the published specifications.
