## **1. DESCRIPTION**

MLCC consists of a conducting material and electrodes. To manufacture a chip-type SMT and achieve miniaturization, high density and high efficiency, ceramic condensers are used.

WTC's HT Series High Temperature Multilayer Ceramic Capacitors is designed with high temperature components by offering maximum operating temperature range and higher reliability performance up to 150°C. These MLCCs are manufactured with X8G and X8R dielectric materials. They provide a highly reliable capacitor with low loss and stable capacitance over temperature. These MLCCs are ideal for most high temperature and reliability market sectors as well.

## **2. FEATURES**

- a. These products have no polarity.
- b. Their electrostatic capacity temperature response is stable at 15% even in high temperature ranges (up to 150°C).
- c. Larger capacity and smaller size (0402 size) with X8G/X8R characteristics

## **3. APPLICATIONS**

- a. Measuring instruments used in high temperature environments.
- b. For time constants and filter circuitry (up to 125°C).
- c. LCD display
- d. Sensor Module
- e. Smoothing and decoupling applications for other devices that operate at high temperature
- h. Other automotive/industrial sets that must withstand high temperatures

### □ Storage and handling conditions

- (1) To store products at 5 to 40°C ambient temperature and 20 to 70% related humidity conditions; MSL Level 1.
- (2) The product is recommended to be used within one year after shipment. Check solderability in case of shelf life extension is needed.

Cautions:

- a. The corrosive gas reacts on the terminal electrodes of capacitors, and results in the poor solderability. Do not store the capacitors in the ambience of corrosive gas (e.g., hydrogen sulfide, sulfur dioxide, chlorine, ammonia gas etc.)
- b. In corrosive atmosphere, solderability might be degraded, and silver migration might occur to cause low reliability.
- c. Due to the dewing by rapid humidity change, or the photochemical change of the terminal electrode by direct sunlight, the solderability and electrical performance may deteriorate. Do not store capacitors under direct sunlight or dewing condition. To store products on the shelf and avoid exposure to moisture.

### □ Recommended soldering conditions

The lead-free termination MLCCs are not only to be used on SMT against lead-free solder paste, but also suitable against lead-containing solder paste. If the optimized solder joint is requested, increasing soldering time, temperature and concentration of N<sub>2</sub> within oven are recommended.
