

LIGHTING FOREVER

## Surface - Mount Ambient Light Sensor

**ALS- PDIC17-55C/TR8**

### Features

- Close responsively to the human eye spectrum
- Light to Current, analog output
- Good output linearity across wide illumination range
- Low sensitivity variation across various light sources
- Operating temperature performance, -40°C to 85°C
- Wide supply voltage range, 1.8V to 5.5V
- Size : 2.0mm(L)\*1.25mm(W)\*0.8mm(H)
- RoHS compliant, Pb Free and Halogen Free package

### Description

The ALS-PDIC17-55C/TR8, is consisting of a photodiode and a current amplification IC. EVERLIGHT ALS series product is a good effective solution to the power saving of display backlighting of mobile appliances, such as the mobile phones, NB and PDAs. Due to the high rejection ratio of infrared radiation, the spectral response of the ambient light sensor is close to that of human eyes.

### Applications

- Detection of ambient light to control display backlighting
  - Mobile devices – mobile phones, PDAs
  - Computing device – TFT LCD monitor for Notebook computer
  - Consumer device – TFT LCD TV, plasma TV, video camera, digital camera, toys
- Automatic residential and commercial management
- Automatic contrast enhancement for electronic signboard
- Ambient light monitoring device for daylight and artificial light
  - Street light, CCD/CCTV

### Absolute Maximum Ratings (Ta=25°C)

| Parameter                           | Symbol           | Rating                   | Unit |
|-------------------------------------|------------------|--------------------------|------|
| Supply Voltage                      | V <sub>CC</sub>  | -0.5~6.0                 | V    |
| Output Voltage                      | V <sub>O</sub>   | 0 ~ V <sub>CC</sub> -0.8 | V    |
| Output Photo Current                | I <sub>PH</sub>  | 0 ~ 5                    | mA   |
| Operating Temperature Range         | T <sub>opr</sub> | -40 ~ +85                | °C   |
| Storage Temperature Range           | T <sub>stg</sub> | -40 ~ +100               | °C   |
| Soldering Temperature Range [Note1] | T <sub>sol</sub> | 260                      | °C   |
| Human Body Model ESD                | HBM              | 3000                     | V    |
| Machine Model ESD                   | MM               | 300                      | V    |

**Note1:** For detail reflow time and the recommended temperature profile, please refer to page 8.

### Recommended Operating Conditions (Ta=25°C)

| Parameter             | Symbol           | Min. | Max. | Unit |
|-----------------------|------------------|------|------|------|
| Operating Temperature | T <sub>opr</sub> | -40  | +85  | °C   |
| Supply Voltage        | V <sub>CC</sub>  | 1.8  | 5.5  | V    |

Note:

1. White Fluorescent light (Color Temperature = 6500K) is used as light source. However, White LED is substituted in mass production.
2. Illuminance by CIE standard illuminant-A / 2856K, incandescent lamp.

**Fig.11 Supply Current vs. Illuminance**

**Fig.12 Output Voltage vs. Illuminance**

### Converting Photocurrent to Voltage

Note:

1. The output voltage ( $V_{out}$ ) is the product of photocurrent ( $I_{PH}$ ) and loading resistor ( $R_L$ )
2. A right loading resistor shall be chosen to meet the requirement of maximum ambient light, and output saturation voltage:

$$V_{out(max.)} = I_{out(max.)} \times R_L \leq V_{out(saturation)} = V_{cc} - 0.8V$$

3. To avoid 60Hz ripple from fluorescent lamps, we suggest that the time constant must be greater than 0.5 second:

$$R_L \times C_L \geq 0.5 \quad (\text{empirical data})$$

**Recommended method of storage**

Reflow Terms: JEDEC Level 2 Specification

Dry box storage is recommended as soon as the aluminum bag has been opened prevent moisture absorption. The following conditions should be observed, if dry boxes are not available:

- Storage temperature 10°C to 30°C
- Storage humidity  $\leq 60\%RH$  max

After more than 72 hours under these conditions moisture content will be too high for reflow soldering. In case of moisture absorption, the devices will recover to former condition by drying under the following condition:

- 192 hours at 40°C +5°C / -0°C and 5%RH (dry air / nitrogen), or
- 96 hours at 60°C +5°C and < 5%RH for all device containers, or
- 24 hours at 125°C +5°C not suitable for reel or tubes

**ESD Precaution:**

Proper storage and handing procedures should be followed to prevent ESD damage to the devices especially when they are removed from the Anti-static bag. Electro-Static Sensitive Devices warning labels are on the packing.

**Recommended Solder Profile**

Notice:

- (1) Reflow soldering should not be done more than two times.
- (2) When soldering, do not put stress on the devices during heating.
- (3) After soldering, do not warp the circuit board.

## Soldering Iron

Each terminal is to go to the tip of soldering iron temperature less than 350°C for 3 seconds within once in less than the soldering iron capacity 25W. Leave two seconds and more intervals, and do soldering of each terminal. Be careful because the damage of the product is often started at the time of the hand solder.

## Repairing

Repair should not be done after the device have been soldered. When repairing is unavoidable, a double-head soldering iron should be used (as below figure). It should be confirmed beforehand whether the characteristics of the device will or will not be damaged by repairing.
