1. Core board

Core board solution dedicated for three-phase four-wire power supply

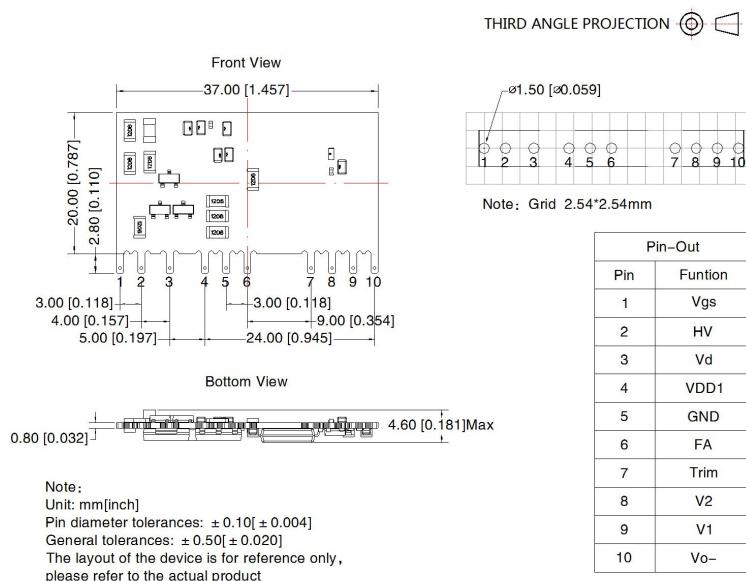

RoHS

CORE BOARD FEATURES

- Integrate 2 MOSFET inside, withstand voltage up to 1300V
- Integrate dedicated high-voltage start controller
- Cost controllable, flexibly selection of external components based on actual requirements
- Flexible design, meets multi-output requirements
- High quality and reliability guarantee
- 5 years warranty

LSC15-26Mxx series—dedicated for electricity with ultra wide input voltage core board solution. It is particularly suitable for applications of electricity, industry control, smart home. The power supply for the core board features ultra wide input voltage, output short circuit, over-current protection, over-voltage protection, low power consumption, high efficiency and high reliability.

1.1 Core Board Dimensions And Pin Definition

1.2 Core Board Pin Function Description

Pin	Pin	Function	Description
1	Vgs	High Voltage Midpoint	Midpoint of the input capacitor voltage, providing a reference voltage for the module
2	HV	High Voltage Input	High voltage input terminal, provide power to VDD shunt capacitor to start the controller, from the input voltage
3	Vd	Drain terminal	Drain terminal of power MOSFET
4	VDD1	VCC	Provide power to Chip terminal from the by-pass capacitor
5	GND	Primary Side	Primary Side GND
6	FA	Input Voltage Detection	To provide voltage and timing feedback to the controller. The pin is connected to a voltage divider between an auxiliary winding and GND. The upper resistance value of the voltage divider can be used to adjust the line voltage compensation strength of the power supply, the ratio of upper and lower resistors can be used to adjust the output voltage stability.
7	Trim	Trim	Output voltage adjustable
8	V2	Input Feedback	Optocoupler and 431 power supply pin
9	V1	Output Sampling	Output feedback sampling pin

10	Vo-	Secondary Side	Secondary Side GND				
----	-----	----------------	--------------------	--	--	--	--

2. Power Supply Demo Board

Power Supply Demo Board

RoHS

Power Supply Demo Board Features

- Ultra wide input voltage range: 45 - 528VAC/65-745VDC
- Circuit can be powered by three-phase four-wire, or any two wires of them
- Output short circuit, over-current, over-voltage protection
- High efficiency, high reliability
- Low ripple & noise, low standby power consumption

The Demo board was based on the latest National Grid Standards and dedicated designed for public change terminals, special-purpose terminals, large customer terminals, and substation terminals. It features ultra-wide input voltage of 45-528VAC/65-745VDC, in line with rated voltage: 380/220VAC (three-phase four-wire) power supply requirements, input to output isolation voltage up to 4000VAC, in accordance with IEC/EN61000 standard "EFT(4KV)", applicable to a variety of terminal applications requiring high isolation voltage and strict electromagnetic compatibility. For extremely harsh EMC environment, we recommend using the application circuit show in Design Reference of this datasheet.

Note: ①With an AC input between 45-110VAC/ 480-528VAC and a DC input between 65-160VDC/680-745VDC , the output power must be derated as per temperature derating curves;

②This product is suitable for applications using natural air cooling; for applications in closed environment please consult factory or one of our FAE.
